**Dehorner Packing**

fibre (1)	<b>201 835</b>	<del>\$59.95</del> <b>\$49.95</b>
tape (2)	<b>212 196</b>	<del>\$29.95</del>
paste (3)	<b>212 195</b>	<del>\$39.95</del>

These three items are from dehorning specialists Keystone Dehorner, USA. They are to reduce fly strike, blood loss and trauma following dehorning of cattle. Small pieces are broken off the fibre pad and pushed into the horn cavity. (The pad should do about 25 horns.) The fibre is then covered with either packing tape or packing paste, to secure the fibre in the horn. The paste is thick and tar-like, with an integrated lid brush. The packing and tape or paste fall off naturally as the horn heals. (3)

**Hot-Shot Rechargeable Power Pack**

batt. pack	<b>205 240</b>	<del>\$199.00</del>
------------	----------------	---------------------

Take a moment to work it out. How many battery changes do you do in your prodder each year? If more than 3 or 4, then you will save money and time with our optional rechargeable power pack. Slides into the same compartment as the standard batteries. 240 volt charger or 12 volt lead required, as for Hot-Shot rechargeable prodders this page.

**Ear Tag Cutter**

economy	<b>213 407</b>	<del>\$4.95</del>
quality	<b>204 109</b>	<del>\$17.95</del>

Very handy knives for removing ear tags, cutting twine, or many other uses where a safe razor-sharp cutter is needed. Razor-sharp blade in plastic handle. Economy is 16cm long and quality is 22cm long with good finger grips.

Firearms licence is not required for this tool.

**Captive Bolt Slaughter Device**

device only	<b>201 078</b>	<del>\$399.00</del>
activators/50 green	<b>201 073</b>	<del>\$69.95</del>
activators/50 yellow	<b>201 074</b>	<del>\$69.95</del>
activators/50 blue	<b>201 072</b>	<del>\$69.95</del>
activators/50 red	<b>210 217</b>	<del>\$69.95</del>
cleaning kit*	<b>201 075</b>	<del>\$49.00</del>
service kit**	<b>210 025</b>	<del>\$69.95</del>

A captive bolt device is used for safe and humane destruction of animals - from small pigs and calves to boars and bulls. A captive retracting 'bolt' is fired into the head, instead of a bullet. Different strength cartridges are used for different sized animals (see chart below). It is imperative that the correct charge is used for the animal being destroyed. The shot is discharged by pressure on the trigger mechanism. The correct point for entry of the bolt is between and slightly above the eyes.

- Activators:
- Calves up to 100kg - Green
  - Calves up to 300kg - Yellow
  - Calves up to 600kg - Blue
  - Calves over 600kg - Red
  - Horses - all weights - Yellow
  - Sheep and Goats up to 35kg - Green
  - Sheep and Goats over 35kg - Yellow
  - Pigs up to 50kg - Green
  - Pigs up to 100kg - Yellow
  - Pigs up to 200kg - Blue
  - Pigs over 200kg - Red

**Important Notice:** Serious penalties apply for dealing with animals inhumanely. If in doubt about use of this device, discuss with your veterinarian. Death should be finally ascertained by checking there is no heartbeat, no breathing and no blink reflex. Be aware that for heavy bulls and horses, this is a stunning device only. Use must be followed by pithing to assure death. (If in doubt consult your veterinarian.)

\*Cleaning kit - Contains 25cm extension handle and two sizes of brush for cleaning gun barrel.

\*\*Service kit - Contains a replacement for mainspring and rubber buffer.

Aim between bottom of ears for correct use. Not between eyes.

Death can be confirmed using the five-finger head check. This is where each finger of the hand prompts a 'hands-on' close check that:

1. The animal has no blink reflex
2. The pupils are fixed and dilated
3. There is no jaw tone
4. The tongue is flaccid
5. There is no rhythmic breathing

**Pithing Rod Stainless**

<b>217 626</b>	<del>\$39.95</del>
----------------	--------------------

The pithing rod is used as an alternative to bleeding-out of a slaughtered or stunned animal. Such measures are required practice after use of a captive bolt device on a large animal (bull or horse). Discuss with your veterinarian. Length 46cm o.a.

**PRICE REDUCED**

**Spay Tool Willis**

heifer 25 x 16	<b>207 732</b>	<del>\$219.00</del> <b>\$199.00</b>
cow std 32 x 16	<b>207 733</b>	<del>\$219.00</del> <b>\$199.00</b>
cow large 35 x 25	<b>207 756</b>	<del>\$219.00</del> <b>\$199.00</b>

The Willis spaying technique enables intra-vaginal or 'passage' spaying. The large-cow size is mostly required for exotic or tropical breeds. These stainless steel tools are specially manufactured for the purpose. Dimensions are hole length x width in mm.

**NB:** This technique should only be performed by professional operators.

**Spay Suture Needle**

16cm each	<b>208 928</b>	<del>\$14.95</del>
21cm each	<b>208 929</b>	<del>\$19.95</del>

Specially-made large-size stainless steel needles for suturing of spay incisions. Suitable for USP 5 or 6 suture. Dimension is length o.a.

**Spay Suture Scalpel Handle**

<b>208 932</b>	<del>\$14.95</del>
----------------	--------------------

This special No.3-size scalpel handle is very fine and incorporates a suture eye. When used with a No.11 blade it creates a very sharp and useful spay suture needle. Supplied non-sterile. Stainless steel.

**Paraffin Oil**

0.5 litre	<b>211 187</b>	<del>\$12.95</del>
5 litre	<b>211 188</b>	<del>\$59.95</del>

Many animal and farm uses, but specially suitable for treatment of sand colic in horses. Also as a bloat remedy for cattle.
