

UNIQUE RUBBER BLEND

Excal teats are manufactured from a unique blend of natural and synthetic elastomers specially formulated to optimise the physical properties of each. The result is an exceptionally durable product with excellent U.V. and ozone resistance, but still retaining full natural flexibility.

Cut-away teat showing internal pump-chamber.

Teat Calf Excal Fast-flow

each 206 680 \$2.45
25-pack outer \$2.00 each

The Excal Fast-flow tube-delivery teat was the fore-runner of all modern calfeteria teats for group feeding of large numbers of calves. Invented by Mrs Nan Duffy, the Fast-flow internal shape creates a pump-like effect as the calf bites it. The first biting action closes the base end of the teat, and further mouth closure forces milk out through the tip. Almost the same effects as when the calf is suckling naturally. The Fast-flow calf teat takes standard 11mm o.d. plastic tubing, and should be mounted at the most ideal suckling height for the calves being reared, with the delivery tubing descending into the milk container. Excal non-return valves should be used at the bottom of the milk tubes to prevent back-flow. The Excal Fast-flow teat is fitted into a 22mm diameter drilled hole, in any plastic or metal container or remote feeding panel.

Teat Calf Excal Big Softy

each 213 696 \$3.35
25-pack outer \$3.15 each

The Big Softy makes all the other 'gravity' calf teats obsolete. With gravity feeders, (where the milk level is higher than the teat), two issues arise. First is preventing leakage through the teat, and second is whilst preventing leakage still enabling the calf to suckle freely. The Big Softy achieves both these ends. The tip design does not leak, even after substantial use, and yet the tip opens freely as soon as the calf begins suckling. The Big Softy will fit all feeders with 22mm (+/-1mm) teat holes. It is equally suitable for hand-held bottle feeding, or for top-teat tube delivery feeders. Big Softy is protected by New Zealand Design No 405207.

Teat Calf Latex

each 208 905 \$1.85
25-pack outer \$1.70 each

Very good quality natural latex rubber calf teat. Fits bottles with neck approx. 25mm o.d. (This teat has no air inlet.)

Teat Calfeteria Black Rubber

each 206 687 \$1.65
25-pack outer \$1.50 each

This calf teat has been marketed in Australia for many years. It is generally fitted into a 20-21mm diameter drilled hole in any plastic or metal container. If used as a 'tube-feed' teat, use our "Calf Feed Tube Aust" 209 237.

Teat Calf Soda Bottle

each 206 686 \$4.95

Real rubber teat to fit most soda bottles. Cut an X in the tip with razor blade or knife, or melt hole with hot nail. Long lasting, heavy duty teat.

Teat Calf Peach

black each 206 684 \$7.95
pink each 206 685 \$7.95
50-pack outer \$7.55 each

Famous Peach brand teats from New Zealand. Quality rubber material has natural shape and 'feel' for calf. Integral non-return valve for easier learning and faster delivery. Suitable for any calfeteria or container with 20-22mm hole. Black material is slightly longer lasting than the classic and original pink Peach teat.

Teat Calf Big Softy Screw-cap Fit

211 363 \$3.95

This variation on our regular Big Softy teat is for use with 54mm id screw-cap teat-mount fittings.

NB: When mounting, slit should be vertical, with longer teat-tip upper most.

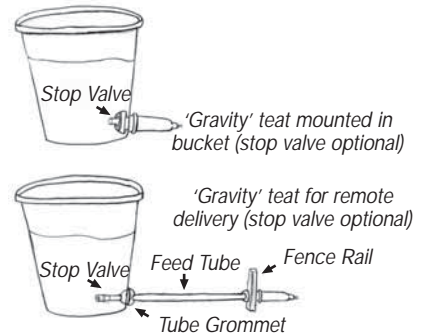

Calf Feeder Tube Stop Valve

10-pack 207 411 \$10.00

The Excal tube and teat stop-valve is a one-piece plastic moulding with a stainless steel ball. The valve stem is 7.7mm o.d., suitable for plastic tube with i.d. from about 6mm to 7mm. Valve length 23mm o.a. Diameter 13mm at maximum. The stop valve can assist the calf suckling. Available as 10-pack only.

Gravity Delivery

Teat Intake Elbow & Valve Excal

10-pack 211 403 \$10.00

The Excal teat intake elbow incorporates a valve to prevent 'blow-back' of milk. This feature makes suckling easier especially for new or weaker calves or lambs. The Excal intake will fit directly into the back of all Excal lamb or calf teats. Another benefit is the teat being enabled to draw milk from the very bottom of the bucket or feeder. Dia 10mm o.d.

Teat Intake Elbow Milkflow

plain 10-pack 211 055 \$11.00
w. valve 10-pack 210 599 \$22.00

The Milkflow teat intake elbow is used to enable a 'gravity' teat to empty all the milk from the bottom of a feeding container. The elbow fits neatly and firmly into the back of the Big Softy teat. The internal dimension will take the tube-end of an Excal Stop Valve to further enhance its versatility. Dimensions are 10.25mm o.d., 7.35mm i.d., length 45mm o.a., enabling suction to a depth of 35mm from the centre of the teat. Sold in 10-packs only.
